

George Washington Carver

George Washington Carver was an American Scientist known for creating methods to prevent damage from crops and soil

He went to an art school where he was the only black person there and after his teacher seen how invested he was with agriculture is when he decided to major in agriculture

After graduating in 1894 he took 2 years he developed the jesup wagon and encouraged farm owners to rotate their crops so they can conserve the nutrients in the soil and told them to grow peanuts instead

Agricultural School on Wheels

October 3 & 4
1:00 p.m. (outdoor program)

In the early 1900s remote tenant farmers had a hard time keeping up with farming techniques until the Agricultural School on Wheels came to town! Learn more about this innovative solution to rural farm education that George Washington Carver helped design.

He developed over 300 uses for the peanuts and 100 for the sweet potato.

This is still useful in today's world because technology has evolved still using Washington's method of the jesup. We use tractors now instead.
